AI AWARENESS QUIZ - PART 2

50 Questions with Short Answers | Kiran Academy

Student Name: Disha Satish Nikam **Batch:** #9011 internship program 7 pm

Section A - AI Companies, Models & Tools

1. **Llama is developed by which company?**
   Answer: Meta.
2. **Gemini is developed by which company?**
   Answer: Google.
3. **Claude is developed by which company?**
   Answer: Anthropic.
4. **Grok is developed by which company?**
   Answer: xAI.
5. **Mistral models are developed by which AI company?**
   Answer: Mistral AI.
6. **Which company is associated with the GPT model family?**
   Answer: OpenAI.
7. **Sora is mainly used for generating what type of content?**
   Answer: AI-generated videos.
8. **Veo is an AI video-generation model associated with which company?**
   Answer: Google.
9. **Midjourney is mainly used for what purpose?**
   Answer: Generating images from text prompts.
10. **What is GitHub Copilot mainly used for?**
    Answer: AI-assisted coding and software development.

Section B - Generative AI Concepts

11. **What does LLM stand for?**
    Answer: Large Language Model.
12. **What is Generative AI?**
    Answer: AI that creates new content such as text, images, audio, or video.
13. **What is a prompt in AI?**
    Answer: An instruction or input given to an AI model.
14. **What is a system prompt?**
    Answer: An instruction that sets the AI's role, behavior, and rules.
15. **What does multimodal AI mean?**
    Answer: AI that can process or generate more than one type of data, such as text, images, and audio.
16. **What is an AI hallucination?**
    Answer: When AI produces incorrect or made-up information as if it were true.
17. **What are tokens in an LLM?**
    Answer: Small pieces of text, such as parts of words, that the model processes.
18. **What is an AI model's context window?**
    Answer: The amount of input and conversation content a model can consider at one time.

19. What does inference mean in AI?
Answer: Using a trained model to produce an output or prediction.

20. What is fine-tuning?
Answer: Further training a pre-trained model on a specific dataset or task.

Section C - AI for Developers & Applications

21. What is an AI agent?
Answer: An AI system that can pursue a goal and take actions using available tools.

22. What is the main difference between a chatbot and an AI agent?
Answer: A chatbot mainly responds to messages; an AI agent can also plan and take actions toward a goal.

23. What is tool calling or function calling?
Answer: A model's ability to request a specific tool or function to perform a task.

24. What does MCP stand for in modern AI development?
Answer: Model Context Protocol.

25. What is an API key used for when accessing an AI service?
Answer: To identify or authenticate an application and authorize API access.

26. What is an API rate limit?
Answer: A limit on how many API requests can be made in a given period.

27. What type of AI product is Cursor?
Answer: An AI-powered code editor.

28. What is NotebookLM mainly designed to help users work with?
Answer: Their own documents and sources, by summarizing and answering questions about them.

29. What is semantic search?
Answer: Search that finds results based on meaning and context, not just exact keywords.

30. Name any three tasks where developers can use Generative AI productively.
Answer: Writing code, debugging errors, and generating documentation.

Section D - Image, Video, Speech, Models & Hardware

31. What is speech-to-text AI?
Answer: AI that converts spoken audio into written text.

32. What is text-to-speech AI?
Answer: AI that converts written text into spoken audio.

33. What does OCR allow a computer to extract from an image?
Answer: Text.

34. What is a vision model?
Answer: An AI model that analyzes or understands images or video.

35. What is meant by text-to-video AI?
Answer: AI that generates video from a text description.

36. What is a diffusion model commonly used for?
Answer: Generating images and other media by gradually removing noise from data.

37. Why are GPUs widely used for AI workloads?
Answer: They perform many calculations in parallel, which speeds up AI processing.

38. What is an NPU?
Answer: A Neural Processing Unit, a processor designed to accelerate AI tasks.

39. What does VRAM mainly store while running large AI models?

Answer: Model data, weights, and intermediate computations needed by the GPU.

40. What is meant by running an AI model locally?

Answer: Running it on your own device or computer rather than relying on a remote server.

Section E - Advanced Awareness, Safety & Responsible AI

41. What is an open-weight AI model?

Answer: A model whose trained weights are made available for others to download and use, subject to its license.

42. What is model distillation?

Answer: Training a smaller model to imitate the outputs or behavior of a larger model.

43. What is LoRA commonly used for?

Answer: Efficiently adapting or fine-tuning a model using a small set of additional trainable parameters.

44. What does MoE stand for in AI models?

Answer: Mixture of Experts.

45. What is an AI benchmark?

Answer: A standard test used to measure and compare AI model performance.

46. What is a guardrail in an AI application?

Answer: A rule or safety mechanism that helps keep AI outputs and actions within acceptable limits.

47. What is prompt injection?

Answer: An attempt to manipulate an AI system with instructions that override or bypass its intended rules.

48. What does PII stand for?

Answer: Personally Identifiable Information.

49. Why should confidential company data not automatically be pasted into public AI tools?

Answer: It may expose sensitive information, violate company policies, or create privacy and security risks.

50. If an AI-generated answer looks convincing, what should a user do before using it for an importantdecision?

Answer: Verify it using reliable sources or a qualified expert.
